## Passenger Concourse Concepts \& Level 2 Evaluation

## Concepts for Level 2 Evaluation

Carried Forward Since 03/26 Charrette

## Evaluation Process

## - 14 evaluation metrics used

- Refinement of Level 1 Criteria
- All quantified

Each concept scored on a scale of -2 to +2

- $-2,-1,0,+1,+2$ (not comparatively scored, scored by performance)
- Zero centered on existing condition when able

## Level 2 Evaluation Metrics

Draft for Internal Discussion Only

| Airside | Assessment Metrics |
| :--- | :--- |
| Airside Operations | The percent of gates with dependent aircraft pushback operations |
| Pushback Flexibility | The numbercent of gates supported by a single taxilane |
| Airside Circulation | The average aircraft taxi distance from gate to departure runway ends |
| RON / De-Icing Areas | The number of RON / De-Icing positions and distance of RON / De-Icing from the aircraft parking positions at the concourse |
| Baggage Handling System |  |
| BHS System Complexity | The count of separate baggage make-up location, bag conveyor length |
| Terminal | The average and maximum walking distances and the number of level changes required for domestic passengers |
| Passenger Journey | The maximum walking distance from the international capable gates to the CBP processor and if a bridge or tunnel connection is |
| required to cross active taxilanes |  |

## Evaluation Split

- Satellite concourses
- No satellite concourses
- Comparisons made within each family

## Holistic evaluation

## Evaluation Results

- Three evaluation methods completed for the two families
- Straight scoring (no weighting)
- Weighted by major category
(Airside, BHS, Terminal, Financial, Implementation)
- Individually weighted criteria
- 4-2 is the highest scored satellite option
- High performance on airside metrics
- Two negative scores (Passenger Journey \& O\&M Costs)
- 2-1 is the highest scored non-satellite option

- Performs better than 2-2 on costs
- Performs better than 2-2 in terms of implementation and phasing

## Next Steps

- Intent of Level 3 Evaluation is to refine concepts further, determine phasing, and financially model implementation
- Ultimate phase of Concepts 2-1 and 4-2 facilitate meeting primary objectives
- Relocated FIS to eliminate passenger rescreening
- Reconfigured baggage handling system
- Expansion of Main Terminal Building
- Centralized concession node (revenue enhancement)
- Phasing on gate demand alone may defer achieving objectives
- Question posed - How do we configure early phase to achieve primary objectives?

## Next Steps

- Hybrid Concept developed to accelerate:
- Relocating FIS to eliminate passenger rescreening
- Reconfigured baggage handling system
- Expansion of Main Terminal Building
- Centralized concession node (revenue enhancement)
- Hybrid Concept minimizes new concourse footprint by:
- Double-loading of terminal concourse
- Re-use of Concourse B
- Hybrid Concept scores highest in evaluation matrix

## Hybrid Concept

Draft for Internal Discussion Only

| $\square$ | Existing Building |
| :--- | :--- |
| $\square$ | Future New FIS |
| $\square=$ | Tunnel with APM |
| $\square$ | Future Service Road |
| CONRAC Facility |  |
| $\square$ | Physical Connection to FIS |
| $\square$ | Future New Concourse |
| $\square$ | Future Apron |
| $-=-$ | Tunnel with Moving Walkway Only |
| --- | Taxilane |

## Level 2 Evaluation Metrics

Draft for Internal Discussion Only

Airside

## Airside Operations

|  | $\mathbf{1 - 1}$ | $\mathbf{1 - 3}$ | $\mathbf{2 - 1}$ | $\mathbf{2 - 2}$ | $\mathbf{3 - 1}$ | Hybrid |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Dependent Gate $\%$ | $0 \%$ | $0 \%$ | $19 \%$ | $19 \%$ | $9 \%$ | $0 \%$ |

## Depentor

## Pushback Flexibility

|  | $\mathbf{1 - 1}$ | $\mathbf{1 - 3}$ | $\mathbf{2 - 1}$ | $\mathbf{2 - 2}$ | $\mathbf{3 - 1}$ | Hybrid |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| \% of Gates with 1 <br> Pushback Taxilane | $61 \%$ | $57 \%$ | $10 \%$ | $22 \%$ | $49 \%$ | $41 \%$ |

## Airside Circulation

Draft for Internal Discussion Only

## Airside Circulation - North of Concourse A

Removal of cross-apron flow provides some benefit

- Limits users of north apron taxilane to only gate users
- Reduces potential for conflict between aircraft pushback and transiting aircraft
- Forces transiting aircraft to center taxilanes/taxiways
- Possible to sidestep pushbacks

## Taxi Distance

Draft for Internal Discussion Only

|  | $\mathbf{1 - 1}$ | $\mathbf{1 - 3}$ | $\mathbf{2 - 1}$ | $\mathbf{2 - 2}$ | $\mathbf{3 - 1}$ | $\mathbf{4 - 2}$ | Hybrid |

## On-Airport Land Use

Draft for Internal Discussion Only

## 2013 Master Plan Land Use Recommendations

- Identified vacant airport property available for development
- Split into major parcel segments
- Shaped Airport strategy for developing excess property

## Development Since 2013 Master Plan

- Airport efforts to develop excess land since have been successful
- LogistiCenter at 275
- DHL Expansions
- Logistics One
- Logistics Two
- Hemmer/Bosch
- Imminent Amazon Cargo Hub
- All development thus far has been consistent with Master Plan
