

APPENDIX C AIR QUALITY

C.1 CONSTRUCTION

Construction activities associated with the Proposed Action are set to begin July 2020 and be completed by May 2023. Potential sources of construction emissions include construction vehicles and equipment. The Proposed Action construction is composed of six phases throughout four years as detailed in **Table C-1**.

**Table C-1
CONSTRUCTION PHASING
Tucson International Airport**

PHASE	ACTIVITY	DURATION (MONTHS)	INPUT	UNIT
2020				
1	Building - Demolition	3	22,800	SF
1	Fencing	1	15,000	linear feet
1	Taxiway Construction	6	1,782,000	SF
2021				
1	Taxiway Construction	3	445,500	SF
2	Demolition - Pavement	1	336,000	SF
2	Taxiway Construction	10	3,779,850	SF
2	Runway Construction	1	143,000	SF
3	Single Story Concrete Masonry Unit*	2	10,000	SF
4a	Fencing	2	28,250	linear feet
4b	Demolition - Pavement	1	595,000	SF
4b	Drainage Basin	1	200,000	SF
4b	Drainage Basin	1	200,000	SF
4b	Fencing Removal	1	8,500	linear feet
4b	Taxiway	11	13,200,000	SF
4b	Runway	11	6,600,000	SF
2022				
4b	Taxiway	1	300,000	SF
4b	Runway	1	150,000	SF
5	Demolition - Pavement	1	336,000	SF
2023				
5	NAVAIDS	2	1,650,000	SF
5	Taxiway Construction	5	480,000	SF
5	Terminal Apron - Markings	1	8,800,000	SF

Source: Landrum & Brown analysis, 2017; "Airfield Safety Enhancement Implementation Study", Tucson International Airport, 2015.

On-road construction vehicle trips, including construction employee vehicle trips to and from the job site, material delivery trips, and off-site hauling trips were estimated. Average employee roundtrip were estimated to be 30 miles. The average material delivery roundtrip from the construction site to material site was estimated to be 40 miles and that the material delivery trucks take two trips per day. Total vehicle miles traveled (VMT) for each type of non-road construction activity during each construction year are provided in **Table C-2**.

**Table C-2
ON-ROAD CONSTRUCTION VEHICLE TRIPS
Tucson International Airport**

ON-ROAD VEHICLE ACTIVITY	VMT
2020	
Employee Commute	316,932
Material Delivery	316,933
2021	
Employee Commute	1,966,698
Material Delivery	2,092,873
2022	
Employee Commute	89,654
Material Delivery	150,875
2023	
Employee Commute	242,038
Material Delivery	105,100

C.2 EMISSION FACTORS

Emissions for on-road and non-road construction equipment were estimated separately following standard industry practices. Emissions from on-road construction vehicles/equipment were calculated using the methodologies outlined in U.S. EPA AP-42 *Compilation of Air Pollutant Emission Factors fifth Edition, Volume II: Mobile Sources*.

Emission factors for on-road construction equipment were developed using the latest version of the Motor Vehicle Emission Simulator (MOVES2014a) developed by the U.S. Environmental Protection Agency (EPA). For the employee vehicle trips, the model was run using gasoline passenger cars. For the material delivery and off-site haul vehicle trips, diesel combination long-haul trucks were assumed in order to estimate maximum potential emissions. **Table C-4** presents the MOVES2014 emission factors used to calculate emissions for on-road construction equipment for 2023, which were used for all years of the project.

**Table C-4
ON-ROAD CONSTRUCTION EQUIPMENT EMISSION FACTORS
Tucson International Airport**

ON-ROAD VEHICLE ACTIVITY	GRAMS PER VMT						
	CO	VOC	NOX	SOX	PM₁₀	PM_{2.5}	CO₂
Employee Commute	4.97	0.13	0.49	0.007	0.010	0.009	467.8
Material Delivery	2.00	0.43	7.28	0.017	0.25	0.23	2541.1

Source: MOVES2014a, Landrum & Brown analysis, 2018.

Emission factors for non-road construction equipment were developed using MOVES2014a developed by the EPA. Emission factors associated with diesel engine vary by equipment and horsepower. Therefore, emission factors were assigned by equipment type and average horsepower. Non-road construction equipment emissions were calculated based on the number of operating hours of equipment use and the emission factors. **Table C-5** presents the MOVES2014 emission factors used to calculate emissions for non-road construction equipment for 2023, which were applied for all years of the project.

Potential on-road construction emissions were estimated by multiplying the VMT data by the appropriate emission factors and the necessary conversion factors to present the emissions in tons. Potential non-road construction emissions were estimated by multiplying the estimated number of operating hours of each equipment type by the load factor, appropriate emission factors, and the necessary conversion factors to present the emissions in tons.

The on-road and non-road construction emissions by year and equipment type are provided in **Table C-6** and **Table C-7**.

**Table C-5
